In Replying Please Quote:

RESIDENTIAL PROPERTY DATA SURVEY: 1985

In the course of our operations the Branch frequently finds it necessary to undertake ad hoc surveys of property tax and service charge levels for a sample of municipalities relevant to a particular study. These surveys can be somewhat time-consuming and inefficient, and the information collected cannot generally be readily made available to all the municipalities surveyed. In an effort to rectify these problems it was decided to experiment with a comprehensive survey of all urban municipalities with the intention of reporting the data collected in an annual publication to be distributed generally.

I am pleased to transmit these tabulations of data collected in the course of the first survey relating to the 1985 municipal year. Virtually all the municipalities that were contacted responded to the survey. The data tabulated is basically that reported by the municipalities; in the interest of speedy publication it has not been subjected to any detailed validation and should therefore be accepted at face value.

Your comments on the survey and its usefulness are invited. Depending on how this survey report is received the Branch will consider repeating the exercise for the present year. Consideration will also be given to experimenting with similar surveys of summer villages and rural municipalities.

May I take this opportunity to thank all those municipal officials who completed the survey questionnaire so diligently and promptly. I hope that this report will be suitable compensation for their collective efforts.

PREFACE

Introduction:

The survey reported here encompassed all urban municipalities.[1] The questionnaires were sent out in December 1985 with a request that responses be forwarded no later than the end of February 1986. A reminder was sent out in March, and some telephone contacts were made in May to complete the survey.

The questionnaire (copy attached) sought to elicit data on utility rate schedules in effect in each municipality and assessment information on the defined representative property i.e.

> A five-to-ten year-old (3C) bungalow, approximately 1200 sq. ft. (110 sq. metres) in area, with a single garage (attached or detached), on a standard residential lot.

For this sample property data was also elicited on the various categories of taxation experienced, the annual bill for the main utility services, and the estimated market value.

Property Selection:

Selection of the particular residential property was at the discretion of those completing the questionnaire. The data reported in

1 Questionnaires were sent to all summer villages but an insufficient tailoring of the questionnaire to the special circumstances facing summer villages resulted in a poor response overall, and many unuseable individual responses.

each case will be broadly comparable to the extent that each sample property conforms to the specifications for the defined property. Some variability due to the selection factor is inevitable, but the intent of the sample property specification was to limit the influence of this factor to minor proportions. The assessment data reported in Part II incorporates some information which may assist in further guaging the significance of this factor (e.g. lot size, year of construction, year of assessment, etc.).

Taxation Data Comparability:

Apart from the selection factor discussed above, comparability of taxation levels may also be influenced by the currency of the property assessment values, the application of special municipal levies, and the incidence of special requisitions. (The direction with respect to special levies asked that these be reported where such levies applied to a majority of the properties in the municipality in the same age-range as the sample property.) Once such factors are taken into account any remaining variability in tax levels can be interpreted as being a function of differences in: the range of tax-supported services provided by the municipality; the level at which these services are provided; the method of service-delivery; and the financing approach. The general fiscal policies of a municipality may also have a significant bearing on the level of taxation, e.g. the level and utilization of reserves. Similarly, the age of a

municipality's infrastructure can be a major factor. No attempt has been made to survey such service-profile detail, but its importance should be borne in mind when making comparisons.

Utilities Data:

In the case of the main utilities, defined here as water supply, sewer service and garbage collection, the survey requested annual total charges, to smooth out the influence of seasonal variations. Basic service level indicators were also surveyed, in the form of approximate average annual water consumption, main means of sewage treatment, and frequency of garbage collection. This information, reported in Part III, may assist in the interpretation of wide differences in service charge levels. Many municipalities included in their response the full bylaw or schedule detailing their rate structures.

Summary Statistics:

The main taxation and service charge detail is summarized in Part I. The basic comparative statistic is that showing the incidence of taxation specifically, and local government costs more generally, as a percentage of the estimated market value. The summary presentation also indicates status group averages, i.e. for all cities, all towns, and all villages.

Reporting Factors:

The taxation categories used in the survey instrument do not appear to have been precise enough to prevent some inconsistency in reporting the total taxation breakdown. As a consequence it is cautioned that the reporting of 'special municipal levies' and 'other' taxation (miscellaneous requisitions by other than school authorities), and, in some cases, 'general municipal taxes,' may not always be accurate. Some obvious reporting discrepancies were eliminated by selectively adjusting the data to conform with the municipalities' Budget Estimate Forms (Schedule BF1). The most reliable inter-municipal comparisons are provided by the total property taxation data. Future surveys will have to be designed to elicit more accurate and consistent reporting of the various taxation components.

The main comparative statistic featured in the Summary presentation (Part 1) is based on the estimated market value of the property in question. It should be noted that a number of municipalities, especially some small villages, did not report this information because of the limited market activity in such properties in their area. Several municipalities also indicated a reticence to provide, or difficulty in establishing, reliable market values under prevailing recessionary conditions.

Technical comments or queries relating to the survey are invited, and should be directed to:

1985 Municipal Year
Representative Residential Property
Urban Municipality Record Sheet

NAME OF MUNICIPALITY: _____

1. WATER/SEWER/GARBAGE CHARGE METHODS/RATE SCHEDULES:
   Where applicable, briefly describe the rates and charge methods in effect for all or most of 1985, and/or attach a copy of the pertinent bylaw(s)/schedule(s).

   (a) WATER

   (b) SEWER

   (c) GARBAGE

2. ASSESSMENT (1985 Tax Year)
   Sample Property: 5 to 10 year-old (3C) bungalow; approximately 1200 square feet (110 sq. metres); with a single garage (attached or detached); on a standard residential lot.

   (a) Year of Assessment for the Sample Property: 19__
   (b) Land Assessment Value $ _____ (c) Size of lot: _____
   (d) Bldg./Imp. Assessment Value $ _____ (e) Year of Construction: 19__
   (f) Total Property Assessment $ _____

3. TAXATION (1985 Tax Year)
   Sample property: as for ASSESSMENT, above.

   (a) Special Municipal Levies* $ _____
   (b) Supplementary School Taxes $ _____
   (c) General Municipal Taxes $ _____
   (d) Other (Please specify: _____) $ _____
   (e) Total Property Taxation $ _____

   *Special municipal levies: To cover special assessments and local improvements where such levies apply to a majority of the properties in the municipality in the same age-range of the sample property.

4. UTILITY SERVICE CHARGES (1985 Calendar Year)
   Indicate the representative annual charges for the sample property:

   (a) Water Supply $ _____; (b) Approximate Average Annual Consumption _____
   (c) Sewer service $ _____; (d) Check main means of treatment:
   (e) Garbage collection $ _____; (f) Indicate frequency of collection: _____
   (g) Total Charges $ _____ (for above services only)

   (lagoons) (tertiary) (other)

5. MARKET VALUE OF SAMPLE PROPERTY:

   (a) Estimated Market Value (of sample property, in 1985) $ _____

N.B. Use the reverse side to indicate any special circumstances, qualifications or comments.
